EDUCATION

University of Waterloo – Candidate for BAsC in Mechatronics Engineering Sept. 2022 – May 2027
GPA: 3.99 (94.27% Cumulative) – Dean's Honours List and Academic Representative
Relevant courses – MTE 262 (Digital Logic), MTE 140 (Data Structures and Algorithms), MTE 120 (Circuits)

SKILLS

Software: C, C++, Python, Linux, Bash, RTOS, Git, GDB, CMake, MATLAB/Simulink, VHDL

Tools and Technologies: STM32, PIC, ESP32, Raspberry Pi, Arduino, OpenCV, TensorFlow, Pandas, NumPy

Electrical: Altium, Soldering, Oscilloscope, Logic Analyzer, DMM, Hot Air Reflow Station

Protocols: CAN, I2C, SPI, UART, SMBus/PMBus

EXPERIENCE

Embedded Software Developer Jan. 2024 – Present
Christie Digital Systems

- Designed embedded software in **C/C++** for the master control and regulation board on venue projectors
- Generated varying **software PWM** with a **PIC24**, enabling sinusoidal wave creation to drive piezo actuator
- Enabled manual control and display of dichroic wheel RPMs through the **CLI**, allowing finer tuning for tests
- Updated laser calibration on start-up by modifying projector initialisation state, enabling colour filter use
- Wrote automation script in **Python** to parse schematic netlist files and error check 16K+ pin connections

Firmware Developer May 2023 – Aug. 2023
onsemi

- Developed firmware in **C/C++** for a multi-phase voltage controller, collaborating in an **Agile** environment
- Implemented a shared **SMBus access layer** in **C** using circular buffers, eliminating global variable reliance
- Multithreaded in **C++** to test driver functionality concurrently, using **semaphores** for resource protection
- Verified **I2C** state machine transitions, using bit masking and bitwise operations to check register values
- Conducted tests for **15+ drivers** and a PMBus library with **94% coverage**, using **GDB** for debugging issues
- Edited **CMake** and **JSON** files to include tests so they could be built and then output results successfully

Firmware Team Lead June 2023 – Present
Waterloop

- Directing **14** active members to develop software for a custom-built **hyperloop** pod used in competition
- Developed a **CAN** driver and config files for the NUCLEO-F767ZI to communicate using the **STM32 HAL**
- Created a KAC-8080N motor controller driver in **C** for closed-loop **PID** control of the **LIM** using a **DAC**
- Designed two-layer PCB in **Altium** to multiplex 48 thermistors, reducing **ADC** channels in **BMS** by 87.5%
- Ideated **Python** state machine architecture for main **RPi** to unpack CAN messages and send error codes
- Used **DMA** to gather data from ADC pin for motor thermistors and set **watchdog** timer to ensure control

PROJECTS

Eye Controlled Trolley

- Programmed an **ESP32** to drive 4 DC motors using L298N H-bridges, enabling speed control over Wi-Fi
- Interacted with AdHawk eye tracking glasses and **Python API** to monitor line of sight with **80% accuracy**
- Processed MPU6050 **gyroscope** data to drive trolley with commands received from socket interfacing

OpenCV Robotic Arm

- Implemented **C++** drivers for **UART** communication with the 6DOF arm through an HC-05 BT module
- Interfaced between **Python** program and **Arduino** using serial transmission to allow sending instructions
- Detected hand gestures with 21 coordinates generated using **OpenCV** and Google's MediaPipe library

Movie Reviews Discord Bot

- Designed neural network with **TensorFlow** using text vectorisation to analyse reviews with **98% accuracy**
- Created interactive bot in **Python** with the Discord API, analysing web-scraped articles using the model

- ## Waterloop Pod

- ## Eye Controlled Trolley

- # Brick Scanner

- Wrote object-oriented C++ driver for controlling a NEMA-17 stepper motor with an STM32 NUCLEO-F401RE. Added micro stepping capabilities for increased resolution. Two motor objects were defined to move a camera arm.
- Set up communication with RPI using UART and interrupts for important messages such as when the next measurement was urgent.

Guitar Playing Robot

- Wrote drivers in C for colour reading, fretting, and strumming. Used colour and ultrasonic sensors to detect progress of tasks. Designed for first year design project.
- Built camshaft system to press on the string at different frets depending on the angle a motor is rotated. The rotation of the motor was tracked using onboard motor encoders

Model: "Movie Reviews Analysis"

Layer (type)	Output Shape
Layer_1 (Embedding)	(None, None, 32)
Layer_2 (Bidirectional)	(None, 64)
Layer_3 (Dense)	(None, 256)
Layer_4 (Dense)	(None, 512)
Layer_5 (Dense)	(None, 256)
Layer_6 (Dense)	(None, 1)

=====
 Total params: 16,296,481
 Trainable params: 16,296,481
 Non-trainable params: 0

Movie Reviews Discord Bot

- Created NLP model with TensorFlow using 50K IMDB reviews. Processed data by vectorising and creating a pipeline with separate training and validation sets.
- Interacted with the Discord API to get access to user messages. Programmed a web-scraping script that collects URLs from a Google query search and extracts text.

OpenCV Wheel Tracking

- Developed program in sub 12 hours for wheel detection instead of current standard of mechanical triggers, improving accuracy. Applied Hough transforms and contour detection snippets.
- Adapted depth camera for Python instead of C++ using WSL, allowing easier detection of stickered holes in the car chassis.
